

the conditioning system comprises at least one cationic polymer and at least one amine-comprising silicone with a weight-average molecular mass ranging from 11,000 to 25,000, wherein the amine-comprising silicone is chosen from:

(a) polysiloxanes corresponding to the formula (I):

in which x' and y' are integers that depend on the weight-average molecular mass, wherein the molecular mass ranges from 11,000 to 25,000, or

(b) polysiloxanes corresponding to the formula (II):
